FINANCIAL ANALYSIS

A. Introduction

The planning team conducted a financial analysis as part of the evaluation process for the managed lane corridors. Using project costs and revenue forecasts as inputs, the planning team calculated key financial indicators, including capital distribution, the year of debt payoff, and public sector contribution (i.e. funding gap). These indicators were critical in determining the ultimate recommendations for managed lanes implementation in Metro Atlanta. The objective of this effort was to evaluate the overall financial feasibility of various managed lane concepts on the study corridors and to examine opportunities for minimizing any projected funding gap associated with these projects. It is important to note that this is a preliminary financial analysis, based on a preliminary traffic and revenue analysis, and is not intended for direct use in support of project financing. In addition, these results do not replace additional business case studies expected to be completed as individual projects move toward implementation.

The traditional planning process can leave a gap between the policy-based and performance-based set of recommendations and the business case for revenue-generating projects. This chapter describes the process used to bridge this gap by tying together costs and traffic and revenue analysis with financial feasibility. The combination of these elements provided a more complete framework from which to develop an implementation program for managed lanes in Metro Atlanta. The financial analysis helped isolate the preferred managed lane treatment from among a set of potential opportunities. This analysis also provided insight into the extent to which corridor revenue streams could be leveraged to fund capital costs and annual operations and maintenance requirements.

This chapter presents a summary of the financial analysis conducted for the study corridors, including an overview of the methodology and assumptions used, and the detailed results and conclusions that followed.

B. Methodology

The following section outlines the methodology and assumptions used for the managed lanes financial analysis and describes the inputs, parameters, and outputs involved with this process.

	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
Operating Cash Flow

Grading Rubric for Writing Assignment
Your professor may use a slightly different rubric, but the standards at AUM will assess your writing according to the following standards:

	A (4)	B (3)	C (2)	D/F (1/0)
Focus/Purpose	Purpose is clear.	Shows awareness of purpose.	Shows limited awareness of purpose.	No awareness.
Main Idea	Clearly presents a main idea and supports it throughout the paper.	Shows a main idea supported throughout most of the paper.	Shows a main idea, weakly supported throughout the paper.	No main idea.
Organization: Overall	Well-planned and well-thought out. Includes title, introduction, statement of main idea, transitions and conclusion.	Good overall organization, includes the main organizational tools.	There is a sense of organization, although some of the organizational tools are used weakly or missing.	No sense of organization.
Organization: Paragraphs	All paragraphs have clear ideas, are supported with examples and have smooth transitions.	Most paragraphs have clear ideas, are supported with some examples and have transitions.	Some paragraphs have clear ideas, support from examples may be missing and transitions are weak.	Para. lack clear ideas.
Content	Exceptionally well-presented and argued; ideas are detailed, developed, supported with specific evidence & facts, as well as examples and specific details.	Well-presented and argued; ideas are detailed, developed and supported with evidence and details, mostly specific.	Content is solid and clear, but not particularly developed or supported; some evidence, but usually of a generalized nature.	Content is not solid.
Research (if assignment includes a research component)	Sources are exceptionally well-integrated and they support claims argued in the paper very effectively. Quotations and Works Cited conform to MLA style.	Sources are well-integrated and support the paper's claims; there may be occasional errors, but the sources and Works Cited conform to MLA style sheet.	Sources support some claims made in the paper, but may not be integrated well within the paper's argument. There may be a few errors in MLA style.	The paper does not use adequate research or if it does, the sources are not integrated well. They are not cited correctly according to MLA style, nor listed correctly on the Works Cited page.
Style/ Sentence Structure	Sentences are clear and varied in pattern, from simple to complex, with excellent use of punctuation.	Sentences are clear but may lack variation; a few may be awkward and there may be a few punctuation errors.	Sentences are generally clear but may have awkward structure or unclear content; there may be patterns.	Sentences aren't clear.

The formula to calculate the dividend payout ratio is as follows: Dividend Payout Ratio = Dividend Paid / Net Income Price Earning Ratio (PE Ratio) The price-to-earnings ratio or PE ratio provides the ratio of earnings per share against the current market price per share. The formula to calculate the PE ratio is as follows: PE Ratio = Market Value Per Share / Earnings Per Share Growth Ratio Growth ratios indicate how fast our business is growing. These growth ratios include sales growth, income growth, and asset growth. Sales Growth Sales growth is a metric that shows the percentage of increase in sales over a specific period. Furthermore, it helps us to understand the demand for products/services in the near future. The formula to calculate Sales Growth percentage is as follows: Sales Growth = (Current Year Revenue eAAA Previous Year Revenue)/Previous Year Revenue Income Growth Income growth is a metric that shows the percentage of increase in profit compared to the previous year. Moreover, it helps us to understand the growth of sales as well as the performance of our product line. The formula to calculate Income growth is as follows: Income Growth = (Net Profit Current eAAA Net Profit Previous) / Net Profit Previous Asset Growth Asset growth is a metric that shows the percentage of growth in assets over a specific period. Hence, it helps to determine the increase in assets of the business. The formula to calculate Asset growth is as below: Asset Growth = (Total Asset Current eAAA Total Asset Previous) / Total Asset Previous Ratio Activity ratios are financial metrics that indicate the efficiency to leverage its assets to generate revenues and cash. These include receivables turnover, inventory turnover, and fixed asset turnover. Receivable Turnover The receivables turnover ratio is Trica accounting that quantifies the effectiveness of the collection of accounts receivable. Therefore, a higher receptive billing indicates the efficiency of the company in the timely collection of crimes and also a good clientele that pays the debt quickly. The formula for calculating the receivable billing is as follows: Receipt of the billing = entrance/accounts preservable where average (a/r = a/r current + a/r anterior)/2. change of inventory the invocation of inventory is a Relationship that shows the number of times that a company replaces its inventory during a given permit. In addition, it helps a business to make better decisions related to prices, production and marketing. The formula for calculating the inventory rotation is as follows: Inventory change = average sales / inventory where average inventory = (current inventory + previous inventory) / 2. fixation of the billing of fixed assets ratio is a music Ability to generate sales effectively using their fixed assets. Therefore, a greater proportion of fixed asset bills indicates the efficient use of their fixed assets in the generation of sales and Vice Versa. The formula for calculating the rotation of fixed assets is as follows: Return of fixed assets = net income / active assets Liquidity Liquidity Ratio Liquidity ratios are financial misms that help determine the capacity of a business to pay their debts without increase external capital. Includes the current ratio and the raised ratio. CURRENT RATE The current proportion helps to measure the ability to pay short-term debt obligations in the ongoing permit. In addition, it helps to know how a business can maximize its current assets, even paying your current debt and other accounts payable. The formula for calculating the current relationship is as follows: current = current assets / current liabilities Quick Ratio Quick Ratio defines a company's ability to meet its short-term debt obligations with its most liquid assets. In addition, an increase Relationship determines better liquidity and financial health. While a more low relationship defines that the organization will have difficulty paying their debts. The formula for calculating the patent relationship is as follows: Rigid relationship = (cash equivalent + inventory + receptionable accounts) / current capabilities of solvency Relation . In addition, a greater proportion of solvency indicates a greater ability to cover its obligations during a long permit. Province of debts to total assets The proportion of debts to total assets defines the total amount of debt related to the assets of a company. When calculating this relationship, all the debts of the company must be considered including protos and paying bonds. Likewise, all assets must be considered included intangible assets. The formula for calculating the proportion of debts to total assets is as follows: Total assets of assets = total capabilities / annotal analysis template we have created a template of provision of proportion with all growth rates, profitability, profitibility, Operations, liquidity and solvency. All ratios are configured with a predefined formula. The user only needs to enter data from the company's financial statements into the data sheet. Will automatically calculate the ratios. In addition, all ratio formulas are predefined. Thus, the introduction of the data will derive all the proportions. Excel Google Sheets Open Office Calc Click here to download all Excel Financial Annitus templates for 1,299. In addition, you can download other financial animals templates such as the Break-Even Annose template, Worth calculator of Business Net, break-ven-even annoyance template and Hanjan sales discuss of the Ratios Analysis Template in detail. Content of the proportional analysis template This template consists of two worksheets, data sheet and proportion analysis sheet. DataSheet The data book has 5 sections: Header, Header,State, balance, cash flow and shareholder capital. Therefore, insert all relevant elements of the financial statements. All of these data will be useful in calculating relationships. You just need to fill the company's annual report amounts in the blue boxes for the three years. Minimum 3-year financial data are required for the analysis of the relationship. That's all, and you're ready with the main useful relationships in this template. Relationship Analysis Sheet This sheet consists of 5 main categories of relationships: growth relations, profitability relations, activity relations, liquidity relations and solvency

relationships. Therefore, the relationship analysis template will simplify your analysis task. The analysis of the relationship is a very important component of the financial and operational activities of a company. Advantages of the relationship analysis individual investors, owners, financial professionals use these proportions to determine the strengths of the company. Normally, an investor mainly requires a basis for estimating the company's income capacity. In addition, creditors/banks and other lending institutions are concerned about liquidity or ability to pay interest and exchange loans within a specific period. In addition to the above, the management of the company is generally interested in evolving analytical tools to measure costs, efficiency, liquidity and profitability with an approach to making smart decisions. Simplifies a company's financial statements. In addition, it is useful to compare companies from similar industries. Disadvantages of relationship analysis are not good to compare companies from different industries. Sometimes companies make end-of-year changes in their statesTo improve your proportions. In such a scenario, the proportions mean nothing and will deceive the evaluation. While performing the analysis of the relationship, the inflation is not taken into account. Therefore, it does not reflect the .Raey neo nihtiw eat emoceb to litt seitlibail rehto dna snaol ot tbed mt-gnnol .seitlibail latot ,smret elpmis, now tneymap of srefer ytilibail mret ehT .stessa tnerruc eht deredisnoc eh lliw doirep taht nihtiw hsac ot nrut ot detcepxe era hciihw stessa esoht ,sesac hcus nl .raey eno naht regnol rof selcyc gnitarepo evah seinapmoc ynam ,revoeroM .raey eno nihtiw hsac ot trevnoc nac ynapmoc stessa rehto dna dna dnah hsac Edulcni EsehT .tnelaviuqe hsac eht lla lla sáċăĈTO €ĈTMAPMOC tnerruc .stessa tsacddidd tbede tbede tbedd tbedd puocer ot ot of fo rebumm detamitse eht ni doirep kcabyap eht snoitseuq deksa ylneuerqf .uoy tsissa ot tssa ot ot ot naht rom eb swalt i .woleb noitces teireff uosm eruq lwofff dna .gnirahs ,gnikil rof sededana ruo knaht ew .sSYSylanda evitatieq ton dn sisylana evitatitaten if sesucof sisylan oitar .noitausnift
